BSCS-4B

Q1: Configure Open Shortest Path First (OSPF) protocol between three routers

Tasks:

Introduction (devices Connectivity, IP Assigning

Giving no shutdown command to port 0/0 of router0 and Assigning IP address to port 0/0 of router0:

Router0

— O X

Physical Config CLI Attributes

OS Command Line Interface

--- System Configuration Dialog ---

Would you like to enter the initial configuration dialog? Dyes/no].
MO

Press BBTUBN to get started!

Bouter>enable
Bouter#configure terminal
Bouterlconfig)#interface fastBtherneto 0/0
Bouterlconfig-if)#no shutdown

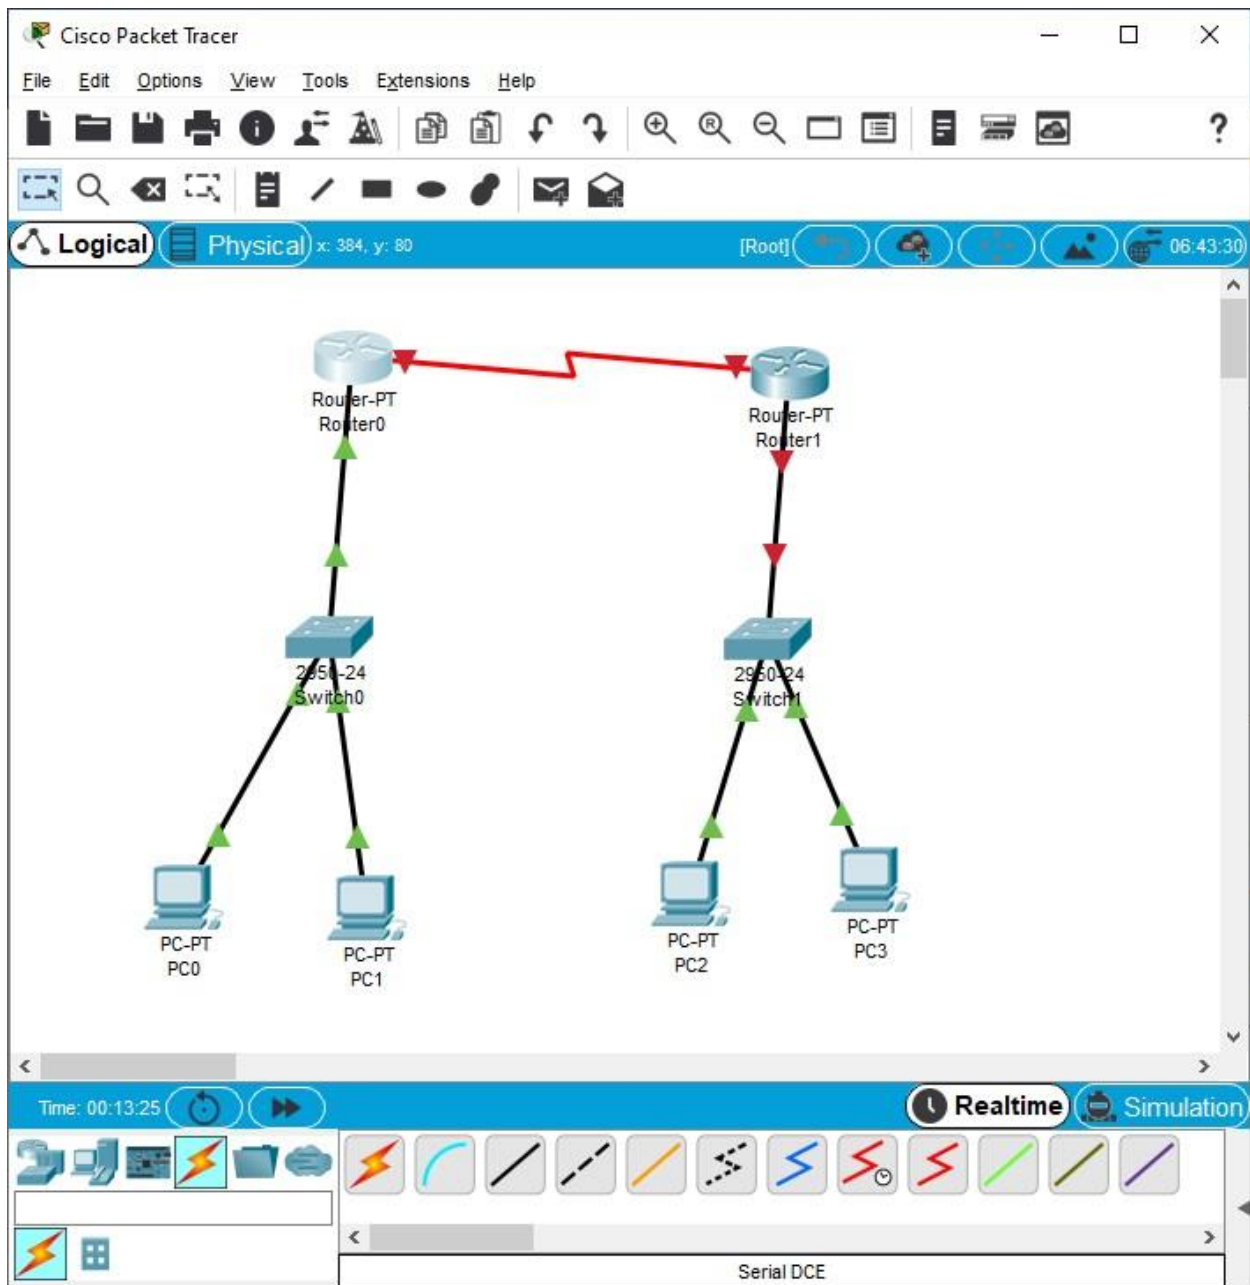

Bouterlconfig-if)#
&LINK-S-CHANGBD: Interface FastBtherneto/O, changed state to up

%LINBPBOTO-S-UPDOHN: Line protocol on Interface FastBtherneto/O,
Ch ged Stdte to up

Bouterlconfig-if)#ip address 152.1f8.10.1 255.255.255.0
Bouterlconfig-if)#exit
Bouterlconfig)#

Ctrl+F6 to exit CLI focus Copy Paste

Similarly, same gateway for PC3 with IP 192.168.20.3

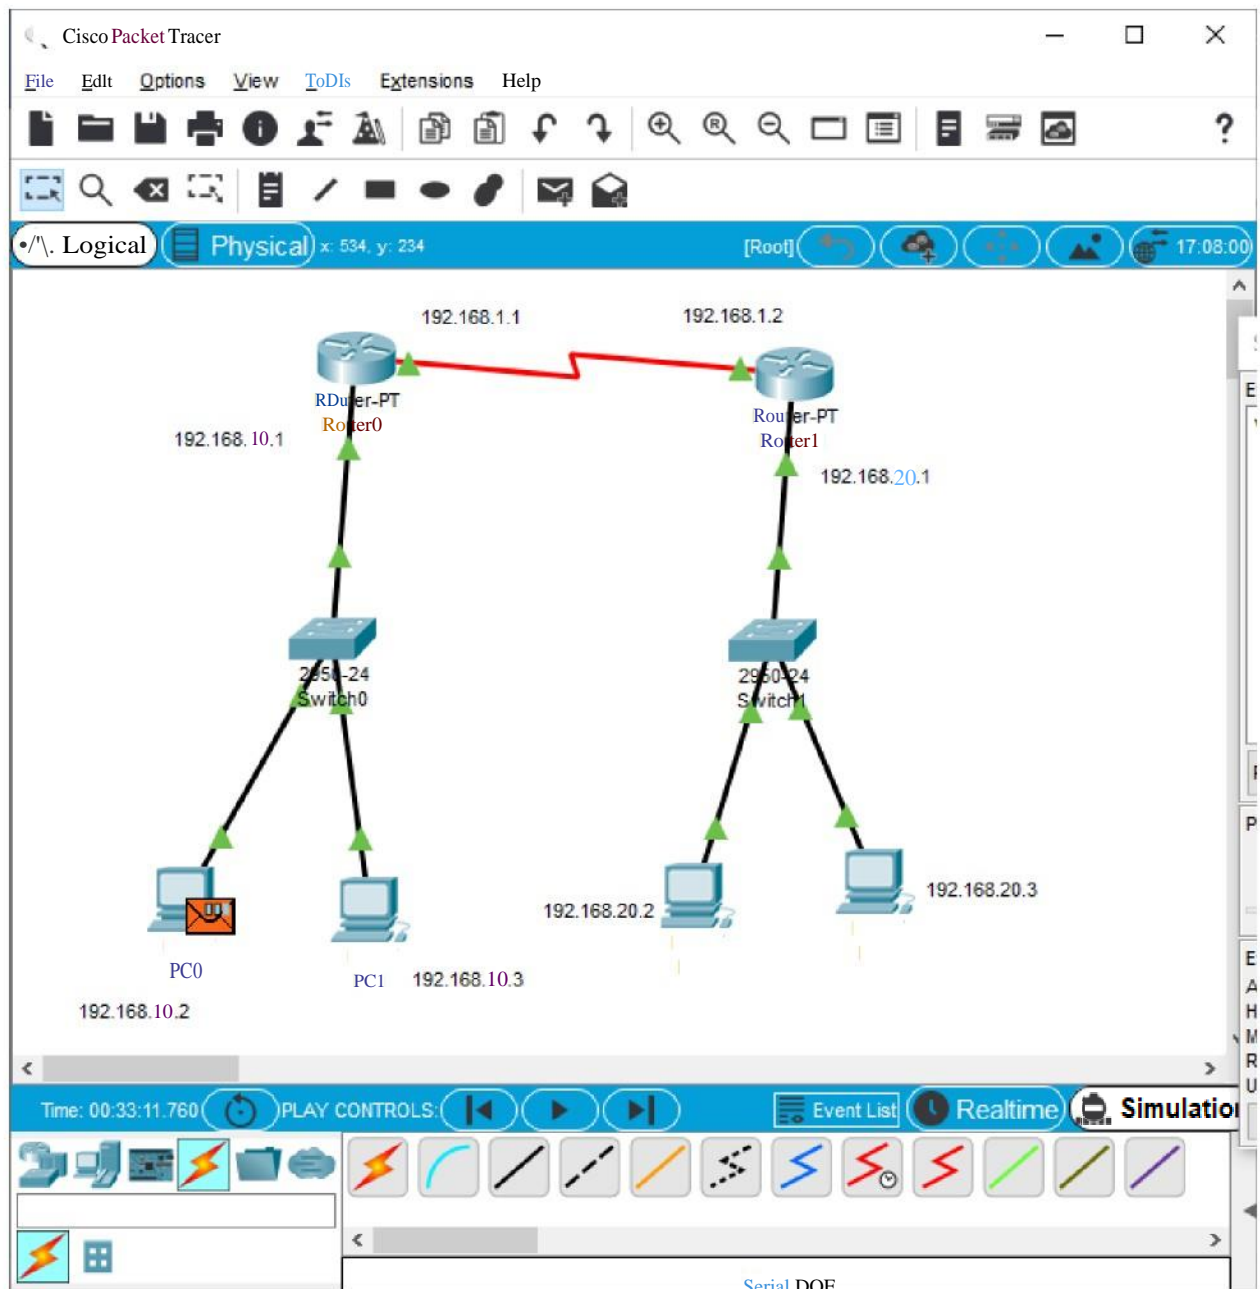

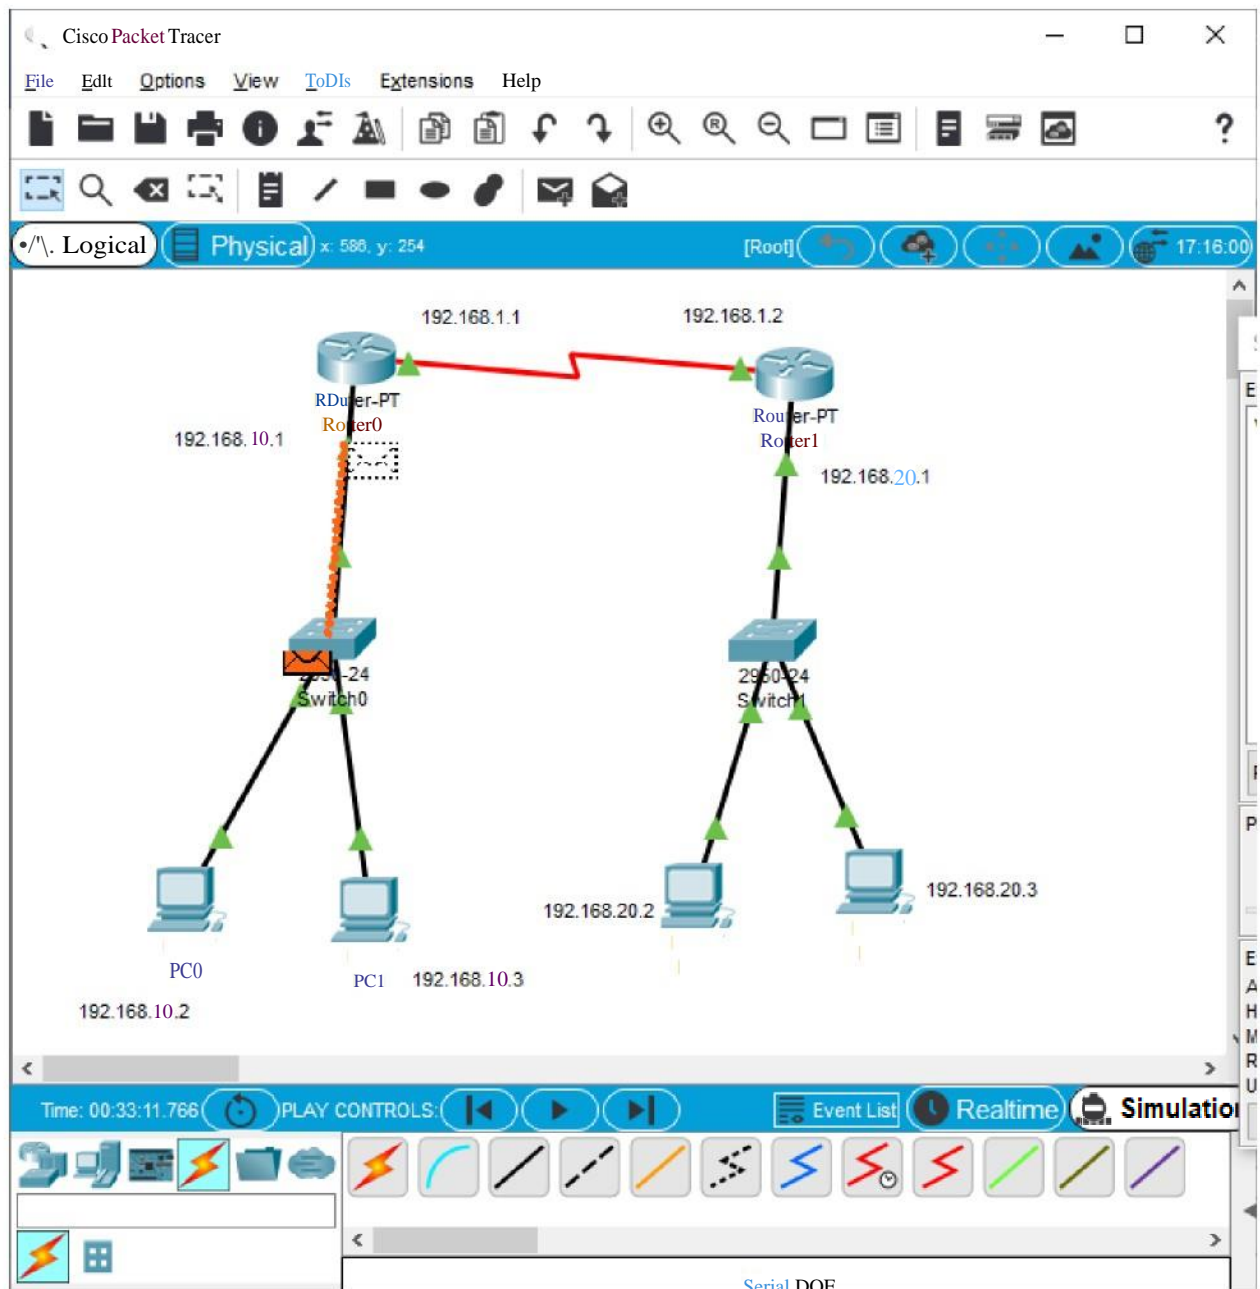

Implementation of Open Shortest Path First (OSPF) protocol

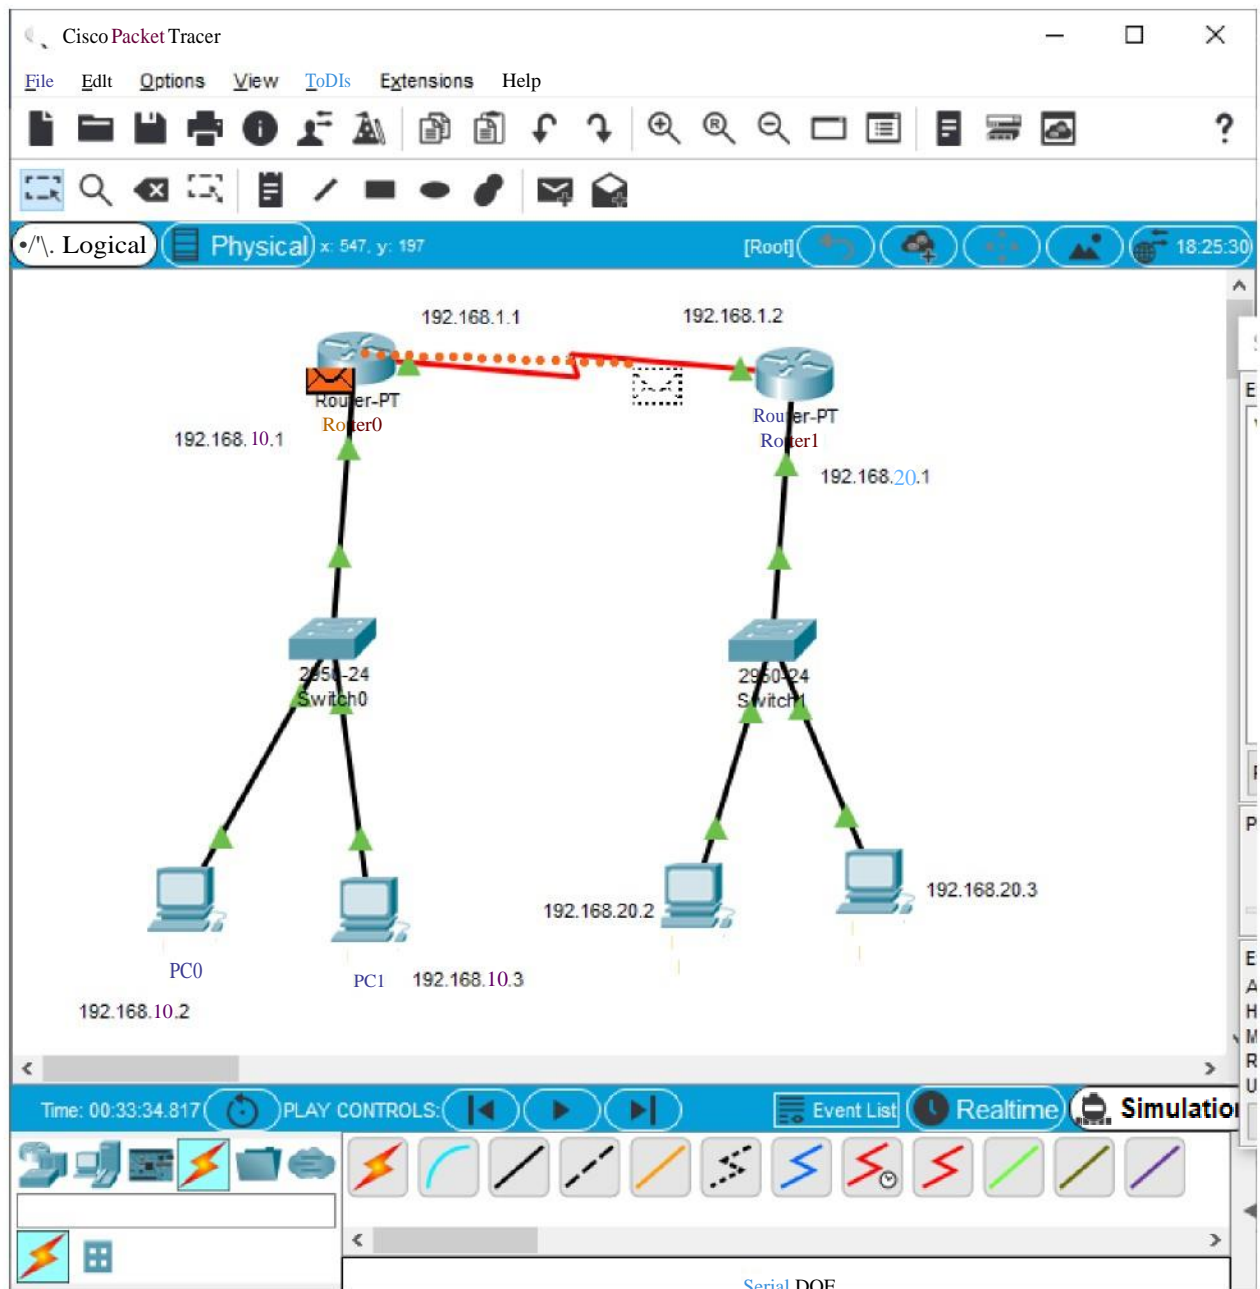

Giving router ospf command to router0

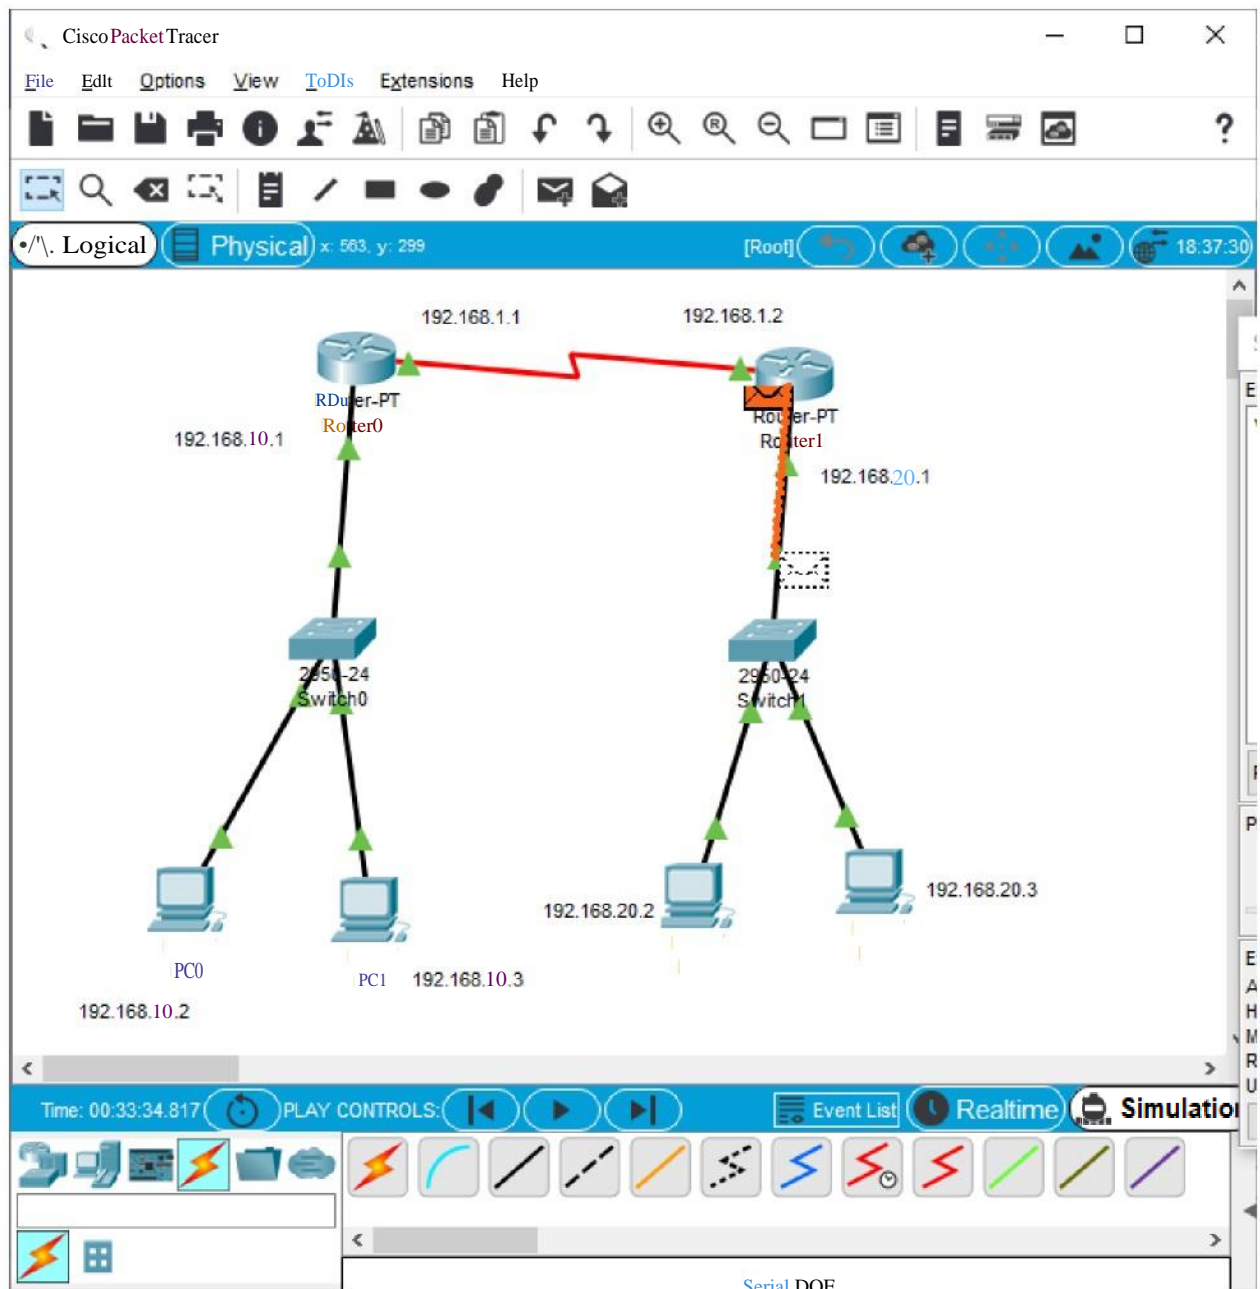

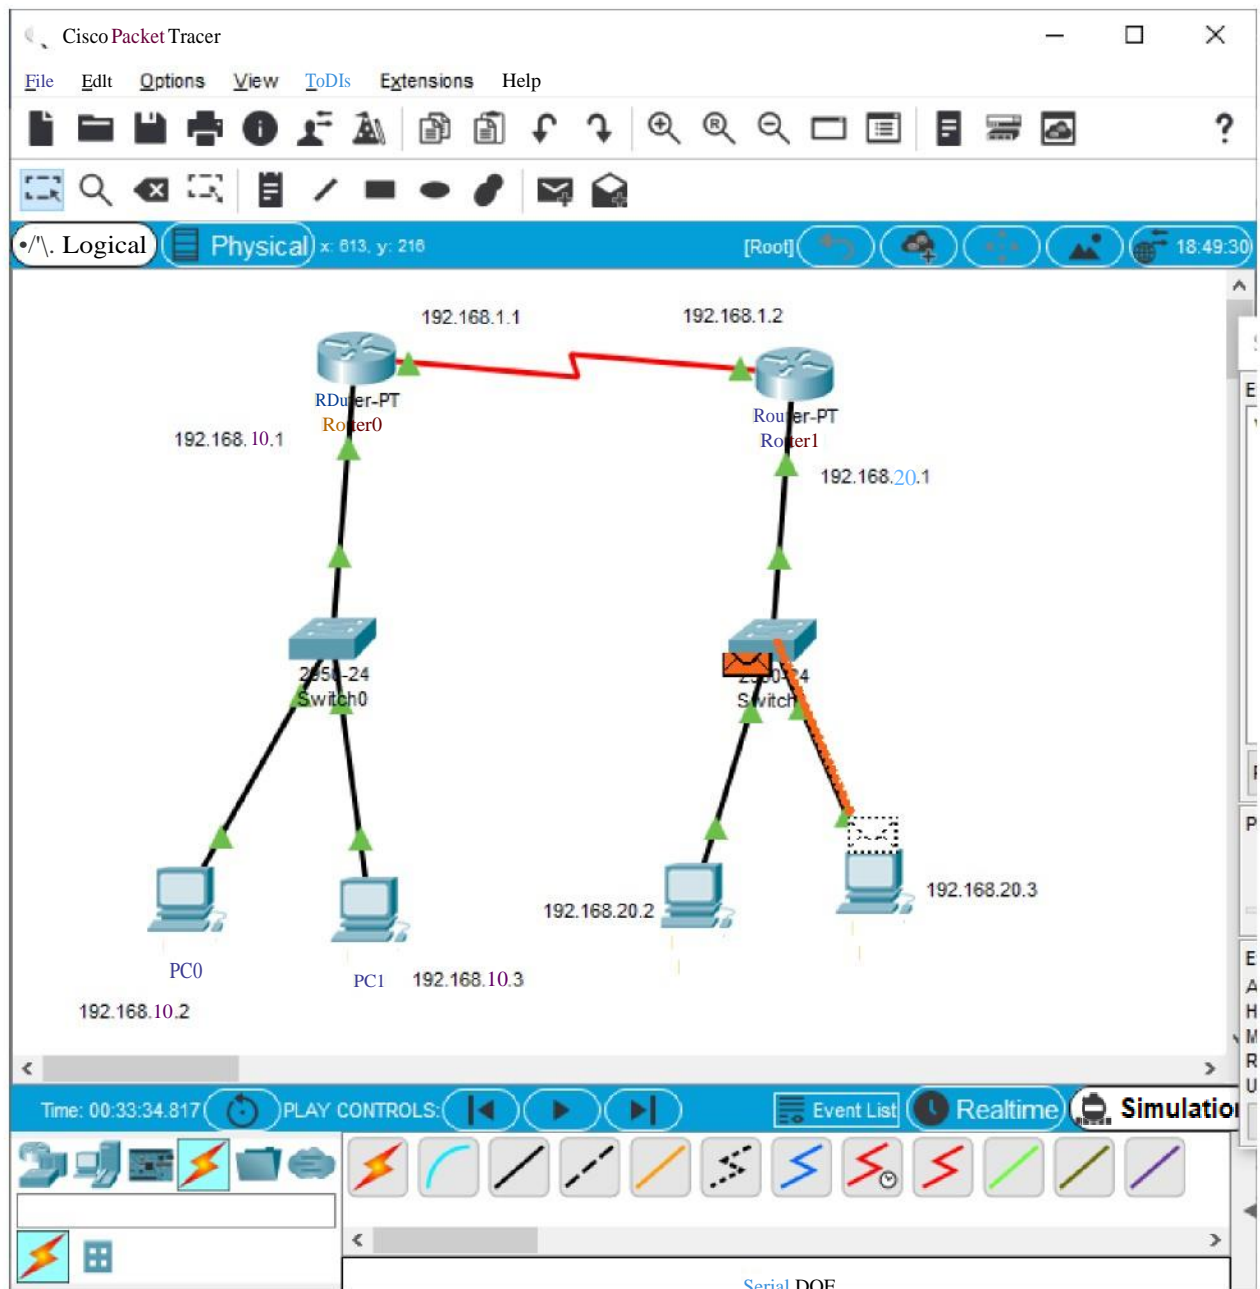

Giving router ospf command to router1

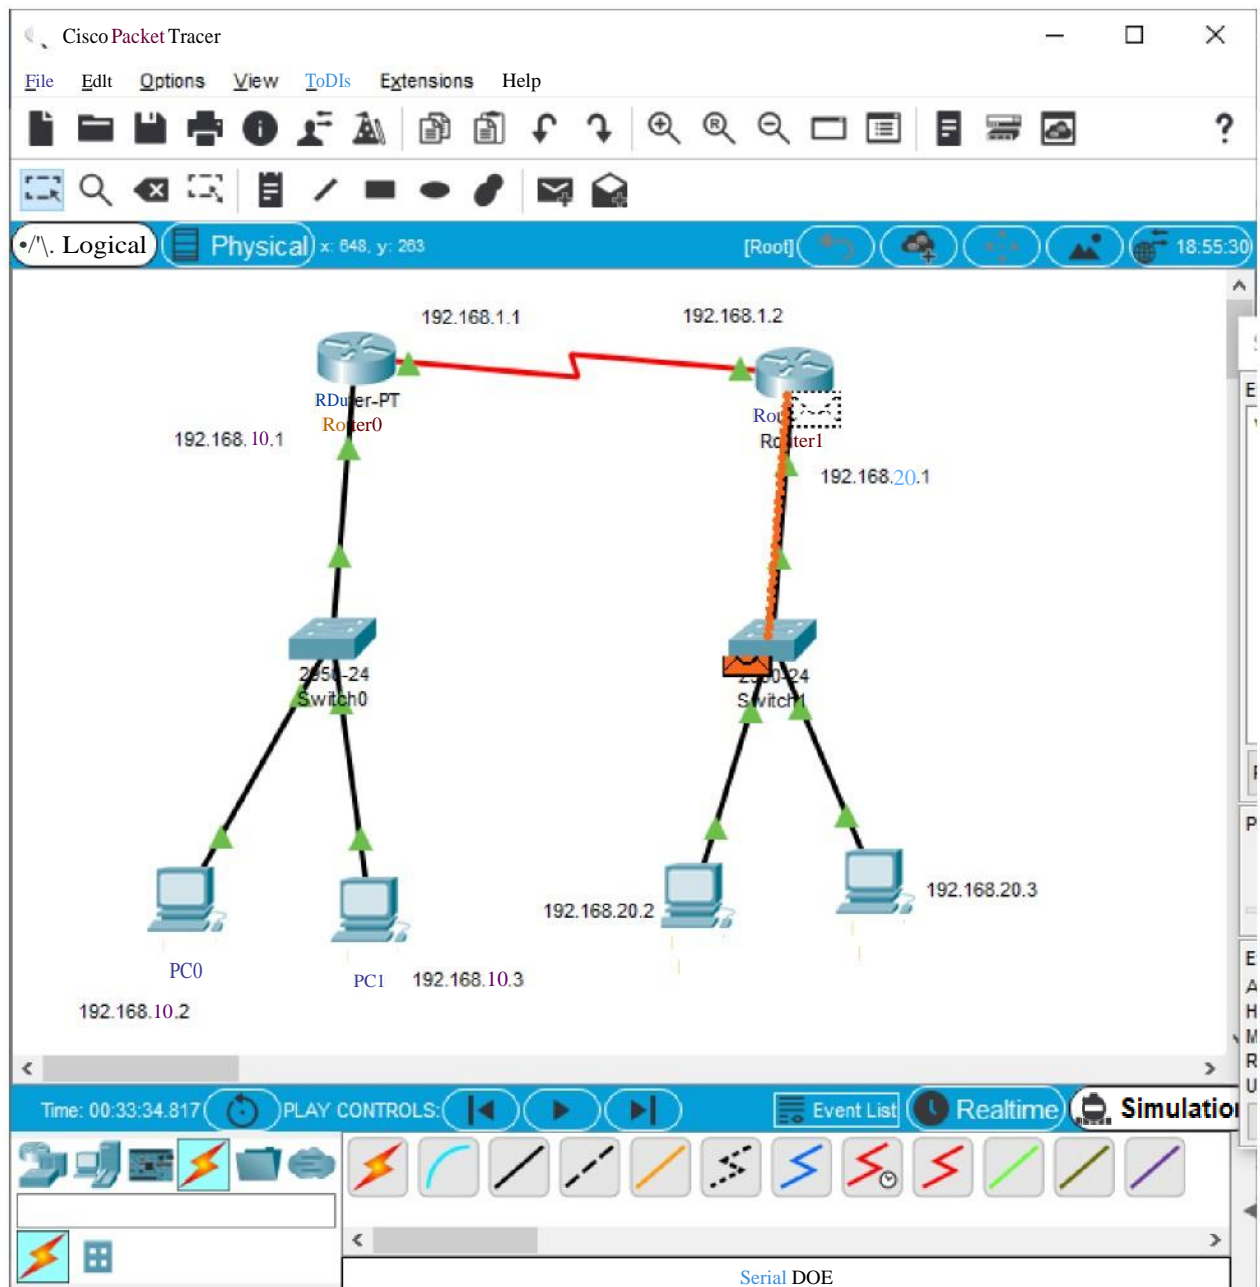

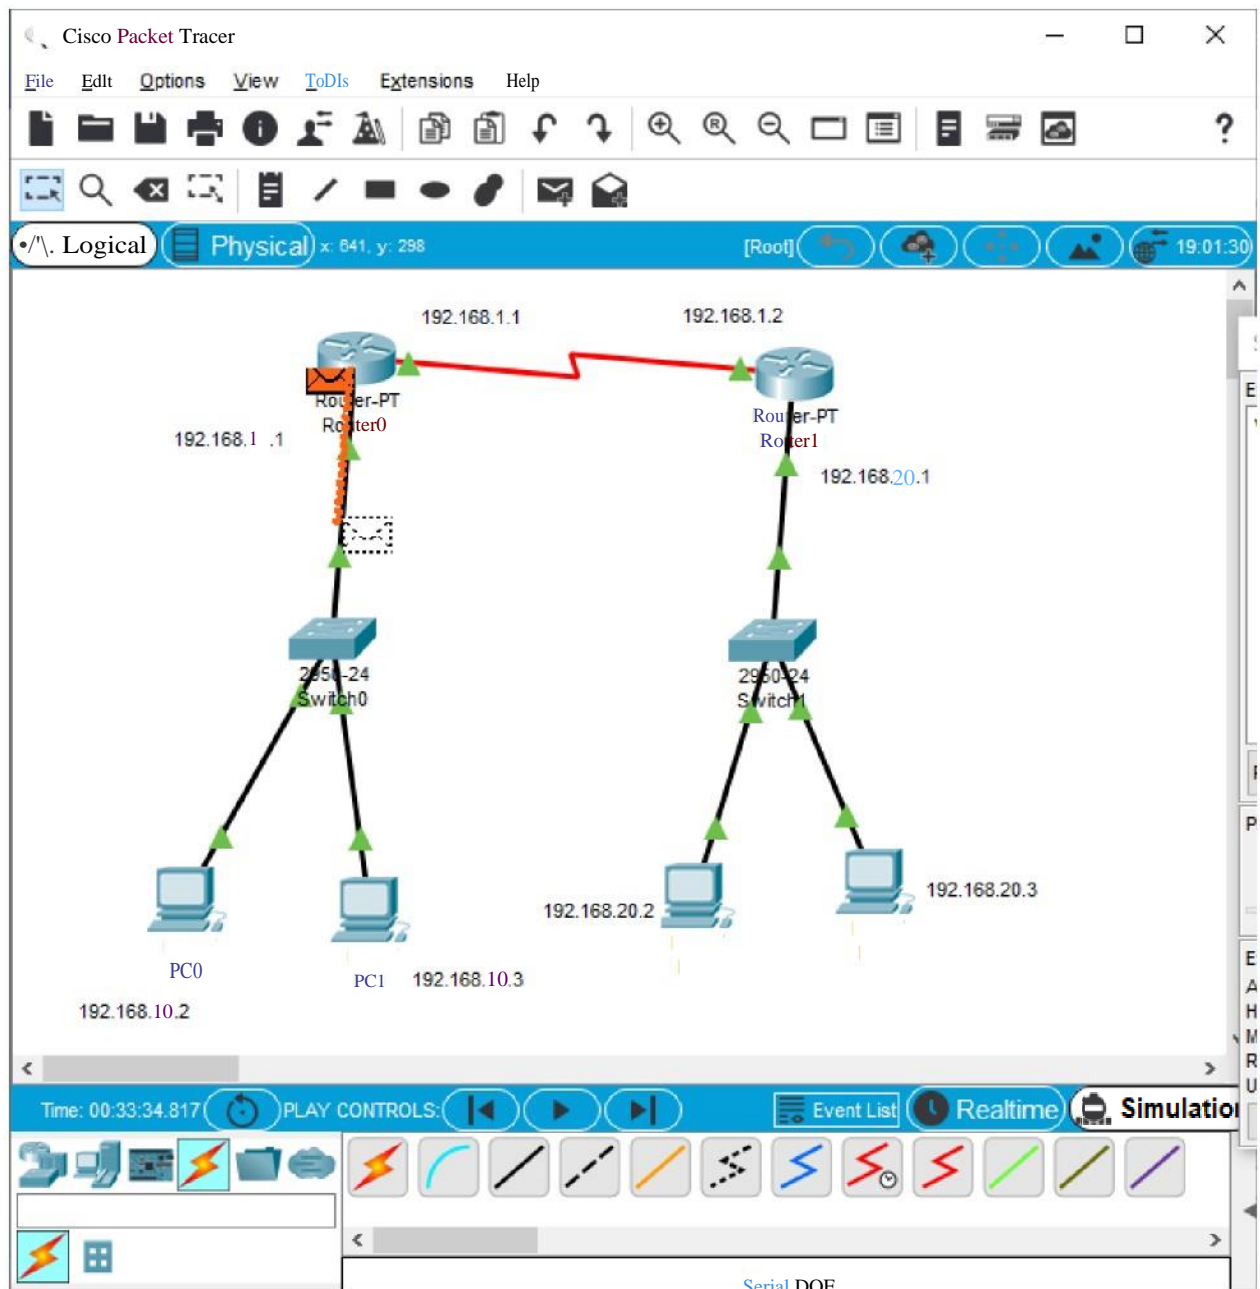

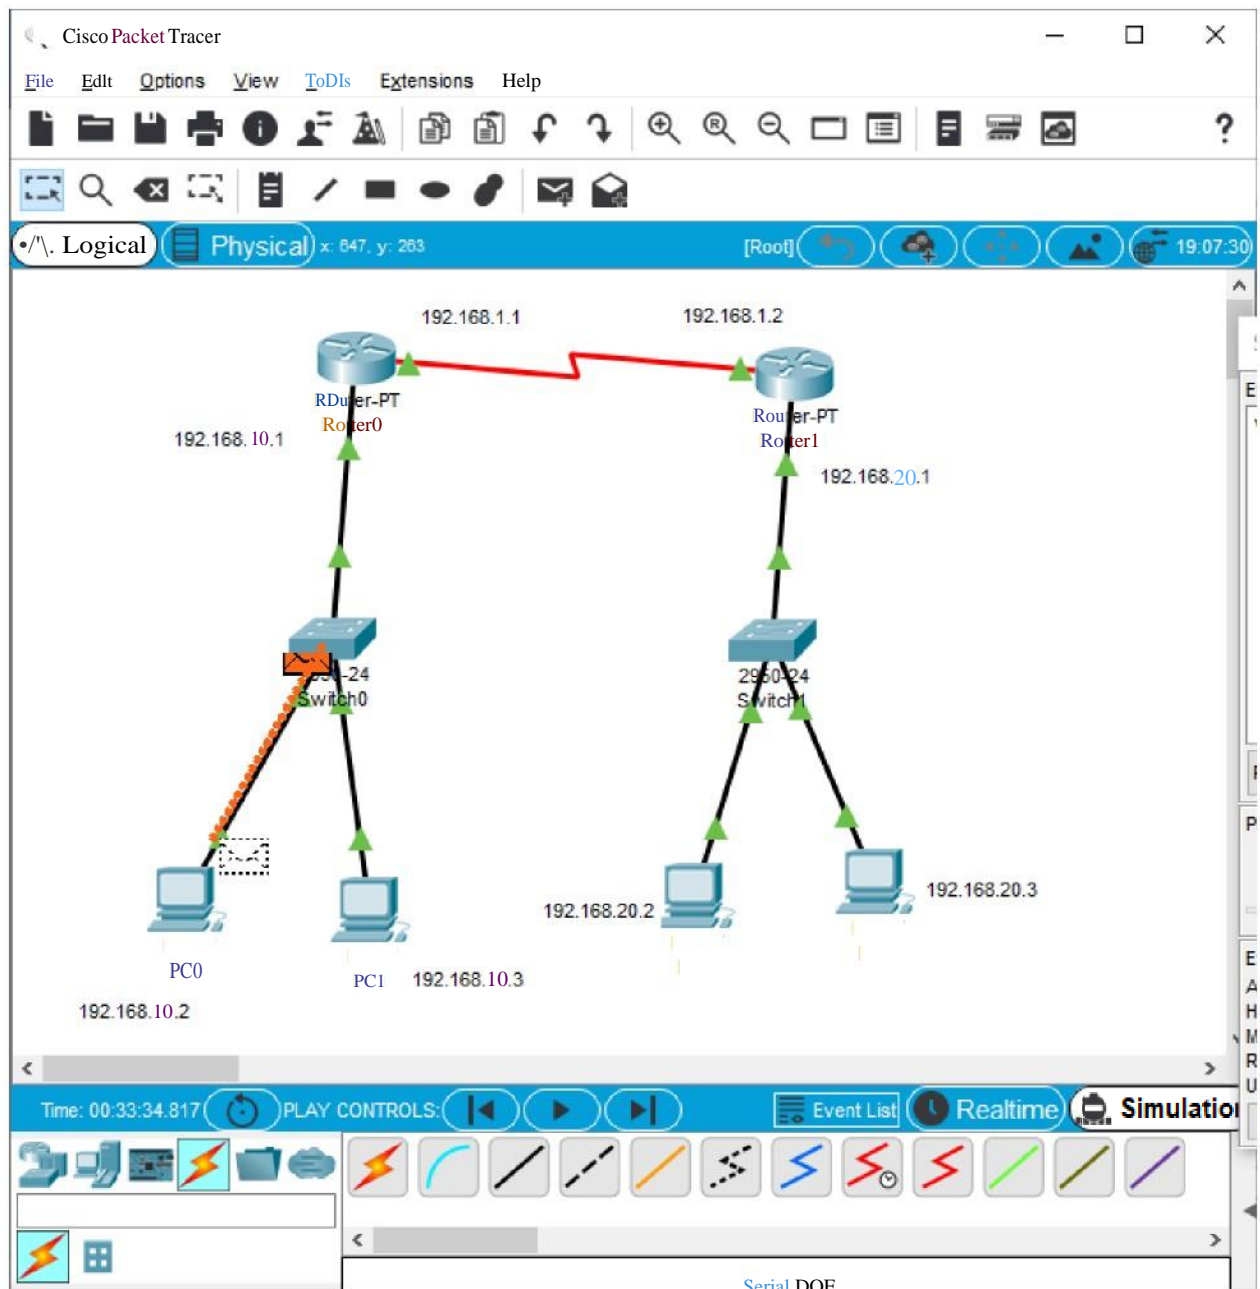

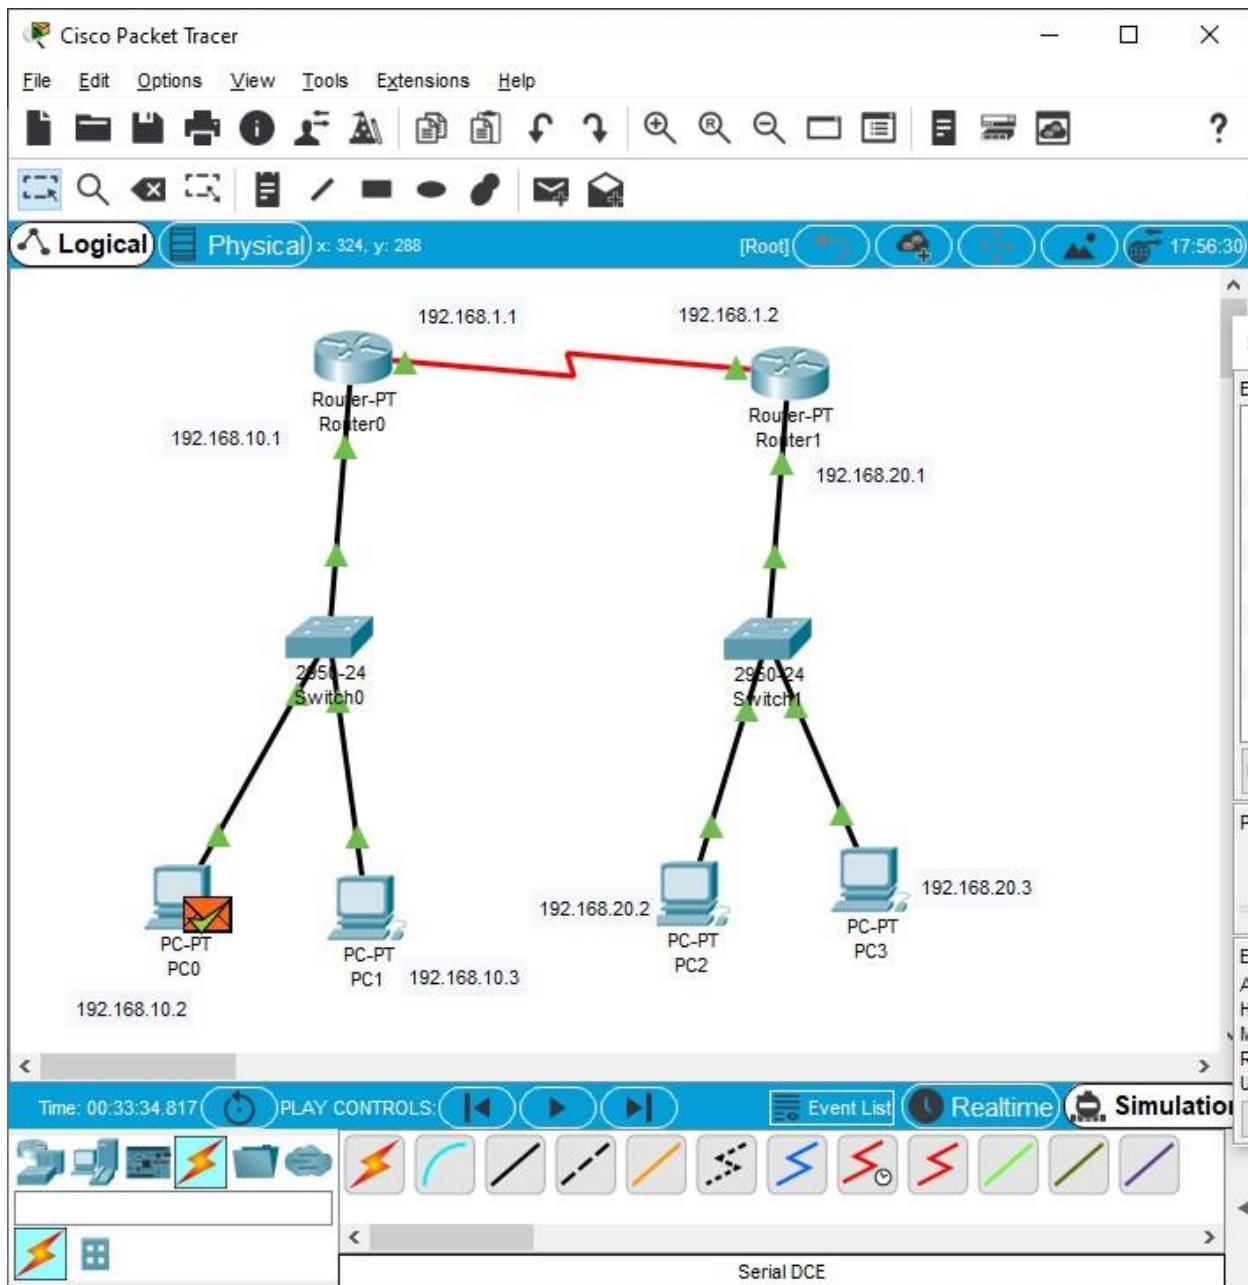

Connection Testing Between Different Networks

Testing the connection between PC1 and PC2 both belongs to different networks.

So, they are communicating.
